

When it comes to realising offshore ambitions, the port of Rotterdam doesn't see any limitations. The port of Rotterdam offers off-the-scale offshore opportunities. The largest port in Europe has the advantages of direct, 24/7 access to the North Sea without locks and tide restrictions, deep water (up to 28 meters), spacious port basins and dedicated offshore facilities. We are happy to facilitate the sector, in all sorts of ways. This includes creating new room for companies to accelerate their development – both onshore and offshore – providing a range of innovation facilities and working together in the area of branding and marketing.

Complete maritime cluster

The port of Rotterdam offers a complete maritime cluster with a variety of shipyards, heavy lift terminals, warehouses, specialized service providers and industrial companies. This offshore cluster has all the know-how and necessary infrastructure to deal with the largest, heaviest and most advanced offshore projects. Rotterdam is for instance home to Europe's largest fleet of floating cranes and sheerlegs in Europe and shipyards can accommodate all types of offshore platforms; the biggest can be served in a 405 x 90 meters megadock. Most importantly, all companies are dedicated to provide their (offshore) customers with the best service possible. This makes Rotterdam the preferred base for the (de)mobilisation, conversion, storage, pre-assembly repair production and (de) commissioning of all kind of vessels and offshore units.

Top quality offshore facilities

The Offshore Facility Calandkanaal and Offshore Facility Allseas "P92" provide berths for offshore units measuring up to 385 meters and a maximum depth of 28 meters.

The well-sheltered locations ensure that work can also continue under less favourable weather conditions in a risk-free, environment-friendly and safe manner. In addition, the facilities have clear waters, ideal for underwater operations and inspections. At the rig parking lots at Alexia harbour at Maasvlakte 2, all types of offshore rigs and platforms can be stacked at a sheltered location for awaiting new contracts and/ or preparation for repair. (De)mobilisation or modification services are available at several locations further within the port.

Maasvlakte 2: Test and demo location for offshore wind

Rotterdam is the ideal location for offshore innovations. Maasvlakte 2 in Rotterdam offers space for offshore testing and demo facilities.

Rotterdam Offshore Community

Rotterdam is proud to be home of the largest concentration of offshore companies within the port area and in close vicinity. To stimulate the promotion and attractiveness of hundreds of these companies, the Offshore Community Rotterdam is set up. The Offshore Community Rotterdam is meant for companies in the offshore industry which are active or settled in the port of Rotterdam region. Being construction company, service provider or training institute; the region is center of knowledge, experience and innovation within the markets offshore wind, decommissioning and oil & gas.

The goal of the community is to strengthen each others business and to increase the attractiveness of the port area as a whole. The community presently has over 90 members and was formed in a joint effort of Rotterdam Port Promotion Council and Port of Rotterdam Authority.

Port of Rotterdam Authority

The aim of the Port of Rotterdam Authority is to strengthen the competitive position of the port of Rotterdam as a logistics hub and a world-class industrial complex in terms of both size and quality. The Port Authority is able and willing to make an impact and so it is focusing on accelerating sustainability in the port and it is a partner in the digitalisation of the port and logistics chains. The Port Authority's core tasks are the sustainable development, management and operation of the port, the maintenance of the smooth and safe handling of shipping and supporting the future-resilience of the port of Rotterdam.
