The Port of Rotterdam is committed to combating climate change and will play a leading role in sustainable energy transition. The reduction of CO2 emissions and efficient use of new and renewable materials are important trade-offs for the Port Authority.

Innovative new Falck training centre
Falck has signed a contract with the Port of Rotterdam Authority regarding the construction of a training centre for the maritime industry. This centre offers training facilities for companies and institutions involved in the maritime and offshore wind industry.

New “green” dredging contract
The Port of Rotterdam Authority is taking the lead in green dredging. Falck has signed a contract with the Port of Rotterdam Authority to carry out advanced underwater surveys and to explore the possibility of using a larger, more efficient vessel for dredging.

Sustainability
The Port of Rotterdam dedicates a large part of its efforts to sustainability. The Port Authority is working on a green transition and is committed to reducing its CO2 emissions. It is one of the leading ports in the world when it comes to sustainability.

Financial result:
In 2018, the Port of Rotterdam Authority’s turnover increased by 4.6% to €712.1 million. Its net profit rose by 4.6% to €186.9 million.

Financial result: 186.9 million euro
In 2017, the Port of Rotterdam Authority’s turnover increased by 4.6% to €712.1 million. Its net profit rose by 4.6% to €186.9 million.

Financial result: 186.9 million euro
In 2016, the Port of Rotterdam Authority’s turnover increased by 4.6% to €712.1 million. Its net profit rose by 4.6% to €186.9 million.
