CONCEPT CLEAN ENERGY HUB. DORDRECHT INLAND SEAPORT.

DEVELOP TOGETHER IN A PORT THAT TAKES YOU FURTHER
**CONCEPT CLEAN ENERGY HUB**
The Port of Rotterdam Authority has been responsible for the operation and development of the Port of Dordrecht since 2013. Dordrecht Inland Seaport is the most landward sea port in the Netherlands. The port area lies at the crossroads between foreland and hinterland. Its unique location, combined with water depths of 9.45 metres, ensure that the port is accessible for both sea-going and inland vessels. In recent years, the Port of Rotterdam Authority, the Municipality of Dordrecht and the business sector have developed Dordrecht Inland Seaport into an attractive port for the maritime manufacturing industry, logistics and the throughput of bulk products. Further optimising the business climate, developing a clean energy cluster and stimulating employment are key focus areas for the coming years. For instance, together with the business sector, the Port Authority is investigating the feasibility of a Clean Energy Hub on Duivelseiland.

**STRONG & CLEAN ENERGY CLUSTER**
The Port of Rotterdam Authority aims to work with the business sector to develop Duivelseiland into a strong and clean energy cluster, comprising the storage, distribution, production/generation and bunkering/refuelling of clean energy. As operator of Europe’s largest port, the Port Authority sees the development of a Clean Energy Hub on Duivelseiland as being in line in with its policy of playing a leading role in the European energy transition. The cluster also contributes to making the supply chain more sustainable for businesses in the logistics chain.

**FIRST STEPS TAKEN**
The first steps have been taken for the development of a strong and clean energy cluster with the signing of a declaration of intent between the Port of Rotterdam Authority and PitPoint.LNG. Together they are investigating options to realise a multi-fuel bunkering station for refuelling with LNG and other cleaner fuels on Duivelseiland point.

**THINK WITH US**
The Port Authority is inviting companies within the clean industry sector chain (generation, conversion, storage, bunkering, maintenance and distribution) to help us develop the Clean Energy Hub concept. If you are interested, have ideas or if you are considering establishing your business on Duivelseiland, please contact:

**ABOUT DUIVELSEILAND - RESEARCH LOCATION**
- Location: where the Oude Maas, Dordtse Kil and Beneden Merwede meet
- Surface area: Approximately 9 hectares
- Water depth at Duivelseiland: 4 to 6 metres (-NAP)
- Accessible water: over 500 metres

---

**Port of Rotterdam Authority**
The objective of the Port of Rotterdam Authority is to enhance the port’s competitive position as a logistics hub and world-class industrial complex. Not only in terms of size, but also with regard to quality. The core tasks of the Port Authority are to develop, manage and exploit the port in a sustainable way and to render speedy and safe services for shipping.
