

OnTrack

Rail Logistics Optimisation

Rotterdam is the port of choice for cargo flowing to and from Europe. Rail transport is a vital component of our extensive network of hinterland connections. It is a reliable and cost effective modality that puts nearby distribution centres and other destinations within reach. It has the added benefit of having a modest carbon footprint.

In a perfect rail chain, all parties would have access to the same accurate real-time information: such as capacity, scheduling and status information. This is currently not the case. OnTrack (formerly known as HaROLD) provides insight in the expected time of arrival (ETA) and terminal handling of trains by providing a shared view of accurate rail and cargo information across the entire chain.

What are key benefits of OnTrack?

- **OnTrack increases efficiency**
Offering all users the same accurate information greatly reduces miscommunications, slack and terminal stay.
- **OnTrack benefits the entire rail chain**
Sharing information helps all rail operators, traction providers, deep sea and inland terminals make better operational decisions.
- **OnTrack provides valuable insights**
Combining the most accurate information available from different sources provides valuable insights into the reliability and performance of the rail network and help utilise all available capacity, personnel and assets much more effectively.

How does OnTrack work?

2 Accurate information

Users get the most accurate information available such as a train's location, destination, expected and actual time of arrival and departure, time slot and progress at the terminal.

1 A single point of truth

All users share a single point of truth for trains that are moving to and from the port.

3 Real time updates

Real time progress and status updates help users adjust their operations accordingly.

4 Smart filters

Smart filters by relevant parameters allow users to zoom in on specific information.

5 Insights

Accurate information and insights about relevant trains offered by OnTrack allow for better operational decision making and performance monitoring

6 Logging and reporting

Various messaging, logging and reporting tools help OnTrack fit into any workflow.
